Summary

Product Designer with hands-on experience designing **AI-powered SaaS products**, e-commerce experiences, and government-scale digital assets. Skilled in translating complex systems and user needs into clear, intuitive interfaces — from 0→1 product design to shipped, live features. Proficient in Figma, design systems, and cross-functional collaboration with engineers. Driven by the intersection of user empathy, business logic, and technical feasibility.

Experience

Being Ingenious (Attavita) — Product Designer — Jun 2025 - Aug 2025

Figma | Shopify | Loveable | Liquid | HTML/CSS & JS | JSON

- Led end-to-end design and development of a Shopify e-commerce site for a health-food brand entering an unfamiliar product category (fortified flour premix)
- Identified that the core UX challenge was user trust and comprehension, not aesthetics — restructured the entire content flow around progressive disclosure and usage-led storytelling
- Designed a content-first information architecture (Hook → Educate → Prove → Convert) that guided skeptical users from confusion to purchase readiness
- Developed and handed off the full site in Shopify, including payments, shipping, and CRM integrations

GrowthGear – Caudate AI — Product Designer — Jan 2025 - May 2025

Figma | HTML/CSS | Loveable | Chatgpt

- Designed an AI-powered analytics SaaS (0→1) that lets non-technical teams generate KPIs and dashboards using natural language — **shipped and live in production**
- Reduced the data-to-insight workflow from 14 steps to 5 by iterating on a node-based visual ETL pipeline, achieving **3× faster pipeline assembly**
- Designed a no-code, no-SQL interface enabling users to build reports without analyst dependency — **0 lines of code required**
- Applied design principles around AI trust (logic transparency, progressive control) to minimise hallucination perception and increase user confidence
- Collaborated daily with founding engineers in a fast-moving startup; design and development ran in parallel, with continuous iteration while shipping

Ministry of Minority Affairs — Visual Designer — Jun 2024 - Oct 2024

Photoshop | Indesign | Illustrator

- Produced high-volume digital and print design assets for a central government ministry, maintaining strict brand consistency across all touchpoints
- Built scalable layout systems, typographic hierarchies, and visual guidelines to support consistent output under tight deadlines
- Managed full design lifecycle — concept to production — across campaigns, collateral, and digital platforms

Education

M.Des — Ambedkar University Delhi — Aug 2022 - Sept 2024

B.Voc (Animation) — ST Xavier's Ranchi — Aug 2019 - May 2022

Skills & Tools

Design

End-to-end product design | Interaction design | Information architecture | Design systems | UX Research | UI/UX | Vibe coding | Prototyping

AI & Complex Systems

AI UX | Systems thinking | Service design thinking | 0→1 product design | No-code/AI-assisted interfaces | Agentic AI

Tools & Softwares

Figma | HTML/CSS | JavaScript | Antigravity | Github | Shopify | WordPress | Framer | Loveable | Google stitch
